Apparatus fo	r synthe ng analog signals in PCM.
Patent Number: Publication date: Inventor(s): Applicant(s):: Requested Patent: Application Number: Priority Number(s): IPC Classification: EC Classification: Equivalents:	EP0337458  1989-10-18  OGAWA TORU; SATO SEIICHI  NAMCO LTD (JP)  LJ EP0337458, A3, B1  EP19890106631 19890413  JP19880090575 19880413  G10H1/12; G10H7/00; G10H7/08  G10H7/00  CA1309775, DE68912380D, DE68912380T, ES2050176T; LJ JP1261909, JP2970907B2, KR9702239, LJ US5050474
Abstract  The present invention provides an analog signal synthesizing apparatus including a waveform memory for storing a plurality of	
apparatus includes a memory for each chathe respective chann a cut-off frequency b included in the PCM	M data sampled with different sampling frequencies, the amount of PCM data corresponding to plural from the waveform memory and used to synthesize the analog signals. The analog signal synthesizing in oversampling device for shifting the sampling frequency of said PCM data read from said waveform annel toward the side of high frequency; a summing device for summing the oversampled PCM data for el; a D/A converter for converting the summed data into an analog signal; and a low-pass filter for setting assed on the sampling frequency shifted to the side of high frequency and for eliminating aliasing noises data from the synthesized analog signal. The elimination of the aliasing noise included in the PCM data for ed out at the common low-pass filter.
